## HOW TO TAKE CARE OF WOODEN TABLES

1. In order not to ruin the wooden surfaces, we recommend to take some precautions: first of all, avoid to hit the wooden tops accidentally with hard or sharp objects, immediately blot any stain or liquid that may be spilled on the wooden top with a dry and clean cloth or with paper towel, do not lay any very warm object on the wooden top and avoid the proximity with heat sources.
2. To clean the wooden surfaces, use a sponge moistened in mild soap well diluted in water and dry carefully with a dry and clean cloth.
3. Do not use abrasive products and, especially for surfaces with matt finish, do not use products containing wax or similar substances that may let it become glossy.
