IRIDESCENT VELVET

---

The Spritz cotton velvet has a shimmering effect, obtained thanks to a special printing process which consists in a highly measured superimposition of colour tones with as many as five different processes. The result is a very special velvet, with an almost antique style. Already in the collection since 2011, for 2016 the Rubelli Design Studio has decided to extend the range of colours by including brighter and more on-trend colours such as pink, ochre and new blues and greens. Available in 26 colours, Spritz is suitable for average use.
