CARE

The possible slight differences in color between one batch of fabric and another are determined by the manufacturing and finishing process that make the fabric unique. When ordering, we recommend requesting the CFA to verify the color. Iron without steaming. This fabric, if used for seating, undergoes a crushing of the original state of the hair which causes a change in the reflection of the hair creating the so-called "gloss of use" or "shading". The hair undergoes crushing from sitting; to restore the appearance we recommend steaming and brushing.
